

## MageBracket RH (or R), RH Kit, RL and RL Kit Fitting Template

- 1 Print this page without scaling.
2. Cut along the red dotted lines, the opening will be the smallest bracket width at the bottom.
3. Slide the open slot of the paper template onto the rib of your metal roof.
4. Cut both sides of the opening evenly to make it fit.
5. If the edges of the opening on the paper template are parallel or nearly parallel to the closest green or black lines, the bracket will fit your metal roof. If the edges of the opening on the paper template have large angles against the closest green lines or cross the green or black lines, the bracket will not fit your metal roof.
6. Try both templates and choose the bracket that fits your metal roof better.
